## [done?] Stuff entered with FCKEditor doesn't parse

Posted by tynamite - 2008/04/08 14:21

---

Stuff entered with FCKEditor doesn't parse as html.  
The html code is shown when previewing a question such as great  
Instead of great

How can I fix this?

---

---

Version 1.70. I'm using the latest version as from yesterday.  
How do I find out the build?

---

---

I suggest to add HTML text in source code-mode, else use the WYSIWYG-Editor functions.

The build can be found in the file name (...build4629...).

---

I'm using build 4629. The latest one.

I have to resort to using the popup editor where there is a "view page source" icon on the toolbar.

This will help you people developing the script, as it parses the html code right as I used it on my php script. There are three instances of the variable \$data or \$data, on lines 5, 14 and 19. Replace it as what you use in your script.

```
include("FCKeditor/fckeditor.php");
include_once "FCKeditor/fckeditor.php";
$oFCKeditor = new FCKeditor('fcktext');
$oFCKeditor->BasePath = "FCKeditor/";
$oFCKeditor->Value = $data;
$oFCKeditor->ToolbarSet = 'desbest';
```

---

```
$oFCKeditor->Width = 620;
$oFCKeditor->Height = 200;
echo $oFCKeditor->CreateHtml();
```

```
/////
```

```
$data = mysql_real_escape_string(trim($_POST));
```

```
//////////
```

```
$query = mysql_query("INSERT INTO strips (title, author, content,thumb,comment)
VALUES('$title','$logged','$imgurl','$thumburl','$data')");
```

```
=====
```
