
[done (?)] Routing people through groups

Posted by eththt - 2008/05/17 13:19

Hello,

In my survey I have a total of four testing conditions. Is it possible to do something like this:

First person to open the survey link: answer questions in group 1, 2, 4 and 5.

Second person to open the survey link: answer questions in group 1, 2, 3, 4 and 5.

Third person ... : answer questions in group 2, 3, and 4.

Fourth person ... : still another group layout.

Then the whole thing starts over with option one again.

Is this possible, or do I need to create four different surveys and figure something else out to redirect users to the different surveys ?

Thanks, eththt

Hi eththt,

In the wiki workaround, there is a solution to use Token value to route people.

http://docs.limesurvey.org/tiki-index.php?page=Workarounds#Condition_question_using_token

perhaps that can help you ?
