
[done] How can I....help me

Posted by phancongphuoc - 2008/05/21 10:29

Hi everybody

Please tell me how to use LimeSurvey to make a survey with my customers

I have already 1000 customers, and i want to send the link to survey to only my customers I add some more code to import multiuser to database, and set default password for them, And then I intend to create a php form to send my survey link to customer emails. In that form there will 2 button "Yes" and "No". If they choose "Yes", they have to login with user name and password which i give them by email. The problem is that i can not do anything to make my survey link require username and password before go into it. Please show me as soon as possible. Thank you in advance

Oh....
Why do you ask me that?
I read many place that I found
I need help to do the thing I wrote.

Well, first of all it would be very helpful to use a more descriptive headline. But that's another topic...

Limesurvey uses tokens for login. So the easiest way is to create a list of customers in a certain format (see manual -> tokens) and import this data as a csv file into the limesurvey tokens table. Let limesurvey create tokens for each of your customer and send invitations to them via limesurvey. They receive an email which contains a link to the survey and a valid token which is attached to the url.

No username/password needed and no additional PHP scripts.

Yes, Phang. Limesurvey can do all you need, and much more but it's very important that new users review the manual. I am a new, but enthusiastic, user too. If we don't spend some time studying the documentation no wonder team members, like Mazi, get some frustrated if we ask questions that are already explained in manual.

Regards, and have fun with Limesurvey!

JL
