
[done] Can't Delete Surveys (170plus_build4927)

Posted by tyago - 2008/06/04 11:24

Hi, I'm having a problem trying to delete surveys with this version. I just can't delete a survey. Other problem is that I can't change the order of the answers of a question and the only answer I can delete is the last. Very strange!

The survey is inactive and in all those situations the actions are displayed but have no effect.

Hi!

Can you please report it as a bug (there might be an existing one on it) Since we cannot reproduce that there we would love to get access to such a system.

Hi,

I've solved the problem changing the `$_GET` to `$_POST` in the `deletesurvey.php`, but this problem appears in other areas in the site.

Can this be a configuration problem? (unfortunatly the site is not life in the internet...)

Since the variables are going through GET and POST requests, shouldn't they be get by using the `$_REQUEST` Superglobal???

Why use `$_GET`? or `$_POST`?

Well, with version 1.71 (5001) all seems to be fine. Thank you, anyway.
