## [done] View results immediately ?

Posted by Regis92 - 2008/06/07 10:23

---

Hello,

I am looking for a poll application with the (usual) possibility for voters to view the results immediately after the validation of the vote(s)?

(and also to be able to view the results without voting from a link in the poll)

Does Limesurvey is designed for this kind of use ?

Else, please could you recommend any other stuff to me ?

(sympoll does it for example but has fewer fonctionnalities compared with Limesurvey)

THANX in advance !

In Limesurvey 1.x normally only the admin is able to take a look at the results. But there is a workaround mentioned in the manual which describes how to show results to other users.

I think the new 2.0 release will have a different approach?!
