
How to link in html to a survey

Posted by Michel Post - 2008/08/29 19:26

Hello, I made a test survey but the link to the survey does not work from my html-page and/or popup frame, while the survey does open when I put the same link directly in the browser (any browser). It does not make any difference whether the link is _blank or _self or anything else.

The link of the html page is:

<http://www.fietsersbond.net/fietsrouteplanner/fietsroutes-dummie/>

The link to the test survey is:

<http://www.fietsersbond.net/limesurvey/index.php?sid=45841>

Has anyone any clue?

Thanks, but no, it is active. The answers can be saved.
