
Problem with SSL-Proxy

Posted by stemeios - 2008/09/05 18:48

Hello,

I have a problem with limesurvey. i want to use limesurvey with our SSL-proxy to reach a greater security level for a special survey. To connect to that SSL-proxy I have to choose `https://ssl.webpack.de/example.de/limesurvey`. Bute the problem is that there occurs an error (it can't find the right directory) and limesurvey switches to the path `https://ssl.webpack.de/limesurvey` but not to `https://ssl.webpack.de/example.de/limesurvey`. Does anyone know how i can change this problem? I tried to modify `config.php` and `$rooturl="https://ssl.webpack.de/example.de/limesurvey`, but it doesn't work.

Thanks in advance.

Please post the settings you set in `config.php` (no real passwords please).

Please switch on debug mode by adding the following line to your `config.php` file:

```
$debug = 1;
```

Are there any errors reported?

Furthermore try searchinh the forum for "https", "SSL". Other user have successfully used limesurvey with SSL.
