

[done] Problem Sending Invitation

Posted by mauriciruiz - 2008/09/07 23:06

Dear people,

First of all, my congratulations to all the LimeSurvey people !!!

I'm a new user and I have installed WAMP Server 2.0C and limesurvey171plus_build5535_20080901

All the functions of the program are running well, but I have problem

when I try to send invitations. I suppose that the problem is related with the e-mail configuration.

I have not installed any smtp software at the computer, and I try to use the smtp service of gmail.

I get this message :

```
Warning: fsockopen() : SSL operation failed with code 1. OpenSSL Error messages: error:1408F10B:SSL routines:SSL3_GET_RECORD:wrong version number in C:\wamp\www\limesurvey\classes\phpmailer\class.smtp.php on line 122
```

```
Warning: fsockopen() : Failed to enable crypto in C:\wamp\www\limesurvey\classes\phpmailer\class.smtp.php on line 122
```

```
Warning: fsockopen() : unable to connect to tls://smtp.gmail.com:587 (Unknown error) in C:\wamp\www\limesurvey\classes\phpmailer\class.smtp.php on line 122
```

I have my config.default.php file as :

```
$siteadminemail = 'pepito@gmail.com';
$siteadminbounce = 'pepito@gmail.com';
$siteadminname = 'pepito';
$emailmethod = 'smtp';
$emailsmtp host = 'smtp.gmail.com:587';
$emailsmtp user = 'pepito@gmail.com';
$emailsmtp password = 'pepete';
$emailsmtp ssl = 'tls';
$maxemails = 50;
```

Also I have the Apache httpd.conf

```
LoadModule ssl_module modules/mod_ssl.so
```

php.ini

```
; For Win32 only.
```

```
;SMTP = localhost
```

```
SMTP = smtp.gmail.com:587
```

```
smtp_port = 25
```

```
; For Win32 only.
```

```
sendmail_from = pepito@gmail.com
```

```
; For Unix only. You may supply arguments as well (default: "sendmail -t -i").
```

```
;sendmail_path =
```

```
; Force the addition of the specified parameters to be passed as extra parameters
```

```
; to the sendmail binary. These parameters will always replace the value of
```

```
; the 5th parameter to mail(), even in safe mode.
```

```
;mail.force_extra_parameters =
```

Could somebody try to help me ?

Thanks in advance

Maurici Ruiz

Try

```
$emailsmtphost = 'smtp.gmail.com:465';
```

instead.

That works for me.

ON second thought it might also be a bug with your PHP version.
What PHP version are you using?
