
alternate exit workaround in 1.7 not possible???

Posted by halyfax - 2008/05/14 15:19

I am trying to add the alternate exit workaround in ver 1.7 and it is not working.

The `<` and `>` tags are being stripped.

I add this in a question field:

First of all, in what year were you born?

```
if ("{"INSERTANS:37895X1X1}" == "1")
{
window.location="https://www.surveys.com";
}
```

I click update question and this is what I get

First of all, in what year were you born?

```
if ("{"INSERTANS:37895X1X1}" == "1")
{
window.location="https://www.surveys.com";
}
```

I "thought" I found the answer

Just select the fullscreen editor (limeFitWin) and then hit the "source" button.

but it still does not work

I tried the full screen editor and clicked source pasted the code then there was no save button so I clicked the (limeFitWin) button again to return and then clicked update question.

then I tried to go back into the fullscreen source and this is what was there

Gender:

```
if ("{"INSERTANS:37895X1X1}" == "1")      {
window.location="http://www.surveys.com";
}
```

actually it did not work. I tried the full screen editor and clicked source pasted the code then there was no save button so I clicked the (limeFitWin) button again to return and then clicked update question. The `<` (script) was stripped again.

After saving I go back into the full screen source and this is what I see

Gender:

```
if ('{INSERTANS:37895X1X1}' == '1') {  
window.location="http://www.limesurvey.org";  
}
```

done:alternate exit workaround in 1.7 not possible

Hi, On my knowledge you have to set a parameter to allow such things in config.php ==> this is a new security option since one of the latest versions!

Try: `$filterxsshtml`

http://docs.limesurvey.org/tiki-index.php?page=Installation#_Security_settings

Not only do you have to fiddle with the editors to get code into the survey, you also have to specifically allow scripts (needs a flowchart to get some of these interdependent things working ;-). Copy from config-defaults.php to config.php the line "`$filterxsshtml = true;`" and set it to FALSE. Then it should work if you use the "source" button or do it without any editor.

Regards.

Can you update the workaround section? This has been asked several times.

Thanks a lot!
