
[done] Condition question using token

Posted by rodbro - 2008/05/13 15:14

Hey there,

Is it possible to use a token to desired if the questions should be shown like:

if token=1 then show qid=1111

Regards

Kenneth

No, this is not possible.

before the question 1111 you can create a radio list choice question(987). with javascript you can use the token value to auto select a question with list radio hided.

Then create a condition for show qid 1111 if radio list = 1

here a example of question 987:

script

```
function Custom_On_Load(){
document.getElementById("question987").style.display='none';
document.getElementById("move2").style.display='none';
setTimeout("Select_route()",100);
}
```

```
function Select_route(){
var routeA="{TOKEN}".charAt(0);
switch (routeA) {
case "1":
document.getElementById('answer51965X95X9871').checked='true';
break;
default:
document.getElementById('answer51965X95X9877').checked='true';
break;
}
```

```
document.limesurvey.move.value = 'movenext';
document.limesurvey.submit();
}
```

script

the Custom_On_Load function (see workaround) check the first character of token and if == 1 check the first option then submit the question

ps: you need to configure the navigation survey with: question by question.

A very nice solution! Can you add this to the workaround section in the wiki/manual? I think the combination of Custom_on_Load function and tokens (placeholders) isn't mentioned there.

Hello,

I have been attempting your workaround with no luck. I made sure to modify these lines with the info for my question.

```
document.getElementById("question987").style.display='none';
document.getElementById('answer51965X95X9871').checked='true';
document.getElementById('answer51965X95X9877').checked='true';
```

But no luck. I have it set on question by question. Any ideas?

Also, is it only checking the first letter of the "token" or can we set it to check other attributes such as "Attribute 1"?

Thanks.

Did you set the correct SGQA Identifier:

<http://docs.limesurvey.org/tiki-index.php?page=SGQA+Identifier>

yes I double checked that. It seems to have worked once, but now it will not let me access the survey at all. I can go to the admin panel but if I open the survey it just says Waiting for response from my domain with a blank screen.

Thanks

Check out "How to use Script (eg. JavaScript etc.)":

FIRST, some info from config-default.php:

```
//$filterxsshtml
```

```
// Enables filtering of suspicious html tags in survey, group, questions
```

```
// and answer texts in the administration interface
```

```
// Only set this to false if you absolutely trust the users
```

```
// you created for the administration of LimeSurvey and if you want to
```

```
// allow these users to be able to use Javascript etc. .
```

```
$filterxsshtml = true;
```

Follow these steps:

In config.php add `$filterxsshtml = false;` (maybe as a last line before `?>`).

Thank you for all of the assistance.

I have the survey up and running with javascript but am still having problems getting this workaround to work.

I have attached the message and some code, it would not let me enter it here even using a code block.
