
Get More Admin Stats !!!

Posted by Jak82 - 2008/06/02 13:20

Im no PHP expert but I have played about with the LS database and managed to produce a site which shows the

Total Number of Users...

Total Number of Respondants...

The amount of surveys per user...

This only works at the moment using wamp with phpmyadmin and it only shows a snapshot of the system in its current form, I do not think it grabs deleted surveys.

We find these stast useful when explaining the usefulness of the system

Requirements

PHP 5+

WAMP server

Feel free to amend or improve.

Can you add this to the bugtracker and get in contact with c_schmitz (project leader)? Maybe we can add some of your code/statistics to the next release?!
