
[done] Use recaptcha instead of captcha

Posted by edfel - 2008/06/29 07:59

Hi:

Why not implement this:

<http://recaptcha.net/>

instead of the traditional captcha...

Hi,

because we will not implement a closed source solution into an open-source project and be dependent on that.

Hi:

Oki I understand from the developer point of view. But for personal / individual usage, there must be a way to integrate it. Just asking if someone have done.

WHAT ABOUT A PLUGIN??!! Many Open Source projects (Joomla, Drupal, phpBB3 etc)have their own, Se here:
<http://recaptcha.net/resources.html>

Thanks!

If you have some spare time you can implement this feature. It should be possible to create a switch (setting in config-defaults.php) to switch between several alternatives.

Feel free to join the development team
