
[done] Q. type : tab with multiple choice question

Posted by Flo51 - 2008/07/06 10:27

Hello,

I've seen way to create a type of question with tab and radio button but I need the same one with multiple choice answer. Is there a way to do this ? (For now, I've create 4 questions, merge it in one tab will be faster).

Thanks,

=====

The "Tableau (Ã©tiquettes personnalisÃ©es) double" (double tab with personalized labels) is the nearest of my need. It just have to change the radio button in check box to allow multiple check...

And perhaps having 3 or 4 tab instead of 2 ? But first question is more important.

Can you post a screenshot of how the question should look like?

I think this isn't possible but I'm not sure if I understood your problem correctly.

Here's the picture. It's not the real question but it should appears this way and I need to check many answer in each title. The problem is just because of the radio button.

Sorry, this isn't possible yet. We are working hard on the brand new limesurvey 2.0. There is a "Ideas & Request" wiki page where you can add your LimeSurvey 2.0 wishes.
