
[done] Simple Survey question but not found on Lim

Posted by jat1970 - 2008/07/06 12:38

Hi,
My survey question is simple, however, I can't find the way to insert it on my LimeSurvey::S

It's a competition, judges are asked to score the performance of people in the contest, using numbers from 0 to 7:

```
Persons name... ----Test1-----Test2----Test3
Person 1 .....  *  _____  *  _____  *  _____  *  _____
Person 2 .....  *  _____  *  _____  *  _____  *  _____
Person 3.....  *  _____  *  _____  *  _____  *  _____
....
```

=(*) drop-down list of numbers from 0 to 7.

Judge would choose a number in the drop-down list. Alternatively, the judge could type a number, instead. I would rather use the drop-down list, since the only valid choices are the numbers 0,1,2,3,4,5,6 and 7.

Take a look at my file, below, if you can't get my...

It's simple, but I can't design it.

Many thanks.:laugh: http://www.limesurvey.org/images/fbfiles/files/survey_request.doc

Hi, Could you perhaps use an array type question, but you would have to have a separate question for each test.

<http://docs.limesurvey.org/tiki-index.php?page=Question+Types#Arrays>

Dear gmaddockgreene,
Thanks for replying to my post. :) I don't think that an array would help, since I would like to assess the score of each person simultaneously.:dry:

Here we are talking about a papers. There are several students and, therefore, several papers. The judge/teacher will have to evaluate the paper, scoring a 0 to 5 in, at least, 3 features. The final score would be the sum of the 3 features.

Example:A paper about history. The paper would be evaluated in 3 points:

Grammar;
accuracy;
Quoted Sources.

Maximum score: 15

I would rather send the survey int this fashion:

```
STUDENTS--Grammar----accuracy----quoted sources---Total
Paper 1----- (5)----- (3)----- (2)----- ::10
Paper 2----- (1)----- (0)----- (5)----- ::06
Paper 3----- (4)----- (5)----- (5)----- ::14
Paper 4----- (5)----- (5)----- (5)----- ::15
Paper 5----- (3)----- (1)----- (4)----- ::08
```

''''
Paper 99------(5)------(3)------(2)-----:::10

I could send a survey asking the judges to evaluate each paper in a separate question, but, if there is 100 papers, there would be a hundred questions. My design would save time and the survey would be more user friendly.

:(

Unfortunetaly this question type isn't supported yet. Right now we are working on the brand new Limesurvey 2.0 release. There is a "Ideas & Request" wiki page where you can add your LimeSurvey 2.0 wishes.
